

Graphs analysis

Intelligence SQL queries wizard

Allow users to generate ad-hoc queries on the database. Users may perform simple or complex queries using filter operators or SQL statements. You can view the queries results on screen and customize the screen with grouping, sorting or pull and remove the necessary fields. You can also save and export it to Excel, HTML, XML and other Text file format.

Intelligence SQL Queries Wizard

Filtering Conditions

Specifies filtering conditions for a SELECT statement.
Please select the criteria you want to limit the effect of a SELECT statement to a subset of rows in the table.

Operator: Greater Than (>) Filter Text: 5000

Fields: ACCOUNT CONTACT NAME, MANAGEMENT CONTACT, MANAGEMENT CONTACT1, GUARANTOR NAME, GUARANTOR PIC, GUARANTOR BENDER, GUARANTOR PRICE, GUARANTOR CITIZEN, NOTES, CURRENT BALANCE, STATEMENT TYPE, DOBRANCHNAME, DOBRANCHNAME1

SQL Statement: select * from DEBTOR where 1 = 1 And CREDITLIMIT < "1000" And CURRENTBALANCE > "5000"

Partner

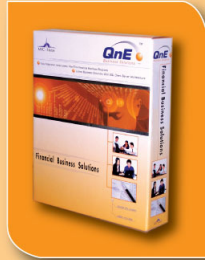

ISV/Software Solutions

QnE Special Features

- SQL client-server architecture
- Real time automatic posting
- User friendly screen interface
- User access right control
- Audit trails
- External file handling
- Advance analysis tool
- System reminders
- On-line help
- Powerful search engine
- Powerful report writer
- Date sensitive report output
- Daily bank reconciliation
- Multiple report format for the sam report type
- Zoom-in from graphs/reports to source document
- Export as external file format(Excel,Word,PDF, JPG, etc.)
- Real-time wide area network

QnE Modules

- Accounts Receivable Module
- Accounts Payable Module
- Sales Module
- Purchasing Module
- Inventory module

QnETM Business Solutions QnE Accounting and Inventory Software

QnE business solutions are designed for business running in networking environment (e.g. LAN or WAN). This software has the most advanced search engine and report writer for users to generate unlimited customized reports.

Facts about QnE

Real-time processing

QnE modules are fully integrated. When you update the information in the system, all other related areas will be instantly updated.

Speed

Typical accounting system are based on file based system that move the entire data over the network. However, QnE is based on client-server system that only sent SQL queries to the server, thus, heavy data processing over the network will be much faster.

Data size handling

With SQL client/server database, QnE handles much higher data limit compare to file-based system. QnE business solutions are designed for business running in networking environment (e.g. LAN or WAN). This

software has the most advanced search engine and report writer for users to generate unlimited customized reports.

Data corruption

In a file-based system environment, should the client's computer, network or server failed during updating process, the entire database may be easily corrupted. However, this is unlikely for QnE when a UPS is installed in the dedicated server.

Scheduled backup

QnE allows users to perform scheduled backup at a specified time without having the on-line users to exit from the system.

Report writer

Built-in powerful report writer that enables users to customize their reports as desired.

Export as external file format

You can export QnE reports as other file format e.g. Text, Word, Excel, Lotus, Quattro Pro, PDF, JPG, BMP, HTML, XHTML, etc.

On-line help

User information guide is available on-line, where you just need to click on the on-line help button and then click on the field which you want to query.

User audit trails

Enable tracking for previous activities and actions done on the system by individual users. (e.g. what information they have amended in the particular invoice, etc.).
